

# CYBERPACKETS:

THOUGHTS ON COMPREHENSIBILITY AND DYSTOPIA

Must we inhale toxic gases  
and consume our pride?

Must our hearts turn radioactive  
as our souls mutate into cyborgs  
with in-grown keyboards  
& circuits mutating over time?

How many of us will be around  
and when this civilization powers down?

Will tiny spiders scamper  
across humanoid bones  
as robotic-mutants manufacture new drones?

Somehow I still believe in the value  
of carbon-life. Even if silicon circuits  
work faster, there's something  
amazing about creatures  
who take several billion years  
to make a few small  
changes & despite  
the odds - some  
times get things  
right.

**Nadya :** Some of this is incomprehensible.

**Liao :** Isn't that good? The edge of comprehensibility –  
where conscious meaning dissolves into unconscious  
recognition – is the nexus for all creativity.

**Gus :** Ah, I hate metaphysical discussions! Each so-called  
"insight" merely invites a new set of questions . . .
